

## Product Update

Our product improvement process has identified the following issue in your 2013 HCPCS Level II code book: J1051 and J1055 have been deleted from the drug table (Appendix 1) and that Lantus was incorrectly listed in the drug table with 50 units rather than the correct amount of 5U.

HCPCS code G9143 is erroneously listed under influenza vaccination in the HCPCS index.

Please note that these errors are not found in the tabular section of the books and, as usual, we encourage our readers to consult the tabular section prior to assigning a HCPCS code.

AAPC is committed to producing accurate and reliable information. We apologize for any inconvenience.
